speechmotion®

Enterprise: Your Customized Documentation Solution

Your Customized Documentation Solution

"SpeechMotion has streamlined our documentation processes by combining our dictation and transcription system into one, affordable solution. The SpeechMotion team have been very supportive of us, even making enhancements to the product based on our suggestions. We have been very happy in our decision to select SpeechMotion."

--Wendy Mangin
Director of Medical Records
Good Samaritan Hospital

State-of-the-Art Technology

SpeechMotion™ Enterprise is a state-of-the-art product suite encompassing voice capture, speech recognition, distribution and e-signature applications for healthcare documentation. As a Software-as-a-Service (SaaS), SpeechMotion is flexible, reliable and budget friendly. Designed to handle high volumes and complex workflows that will give any size organization, from a single-practitioner office to a multi-facility hospital, the efficiency and productivity gains required to compete in today's competitive healthcare environment, SpeechMotion Enterprise is the right choice for modern healthcare facilities.

Time-tested for over a decade, Enterprise's built-in, user-friendly documentation and management tools improve efficiencies by centralizing common tasks that are often decentralized in many legacy systems. From workflow monitoring to statistics reporting, SpeechMotion Enterprise provides for all the managerial and technical needs of its users.

HIM and transcription managers originally designed SpeechMotion Enterprise for flexibility and cost-effective customization, allowing the platform to easily adapt to any environment for transparent integration and full interoperability. Enterprise's ability to customize to your organization's unique requirements minimizes the need for change on the part of your users, improving adoption rates and streamlining implementation.

Seamless Integration

SpeechMotion Enterprise works behind the scenes, gathering dictation and pairing it with patient information from your existing system. Dictation is sent for transcription or back-end speech recognition, depending on utilization. As documents are completed, they are delivered back to your existing workflow, including your EMR or other electronic storage, as well as to any combination of printing and faxing.

Over the years, SpeechMotion Enterprise has been successfully integrated with a number of leading EMR systems, including, but not limited to: Epic, Cerner, McKesson, Meditech, OnBase, Allscripts, Centricity, and Logician - not to mention a number of 'homegrown' systems.

Mobile Accessibility

In today's world, transparency and access to information is imperative for efficient and timely management. A user's ability to quickly monitor and access information was a key focal point in the design of SpeechMotion Enterprise.

Modules for general account maintenance, statistical reporting, voice management, and document archival are available to managers both on and off site. This allows the customer to directly monitor and maintain their information, rather than submitting change requests, which may delay important updates. Customers may access SpeechMotion Enterprise via a client application, installed locally, or via our web-portal, making SpeechMotion accessible from anywhere you have an internet connection.

To Meet Your Evolving Needs

Ensuring Patient Confidentiality

Patient confidentiality is a critical aspect of healthcare data management. SpeechMotion Enterprise provides encryption for all incoming and outgoing data, fully in line with HIPAA/PIPEDA requirements. We regularly review all systems for security compliance and strive to exceed expectations.

Within the platform, data and patient data is kept secure through user-defined restricted privileges. All records are encrypted and are protected from unauthorized access via secure, embedded login credentials.

In addition to data security, our data center housing the main storage and host servers of SpeechMotion Enterprise is a Class V Data Center, designated secure by the US Department of Homeland Security.

e-Signature

SpeechMotion Enterprise offers a flexible, web-based e-signature option for customers who wish to electronically sign documents within SpeechMotion Enterprise. Physicians may sign on to SpeechMotion's secure web-portal from anywhere they have an internet connection, even home, to access and review documents awaiting signature.

Facilities utilizing SpeechMotion's e-signature may configure system alerts to notify the physician that important data is missing. Or, facilities can choose to route jobs with missing data elements to an administrator for review before they are sent to the physician for signature. This alert system ensures only complete documents are distributed to referring physicians and to the facility's EMR for placement in the patient's permanent record.

Flexible Speech Recognition

SpeechMotion Enterprise offers an unprecedented unified back-end and front-end speech recognition technology. Voice profiles are trained using traditional transcription, eliminating the need for your physicians to train the engine. One voice profile drives the recognition front-end and back-end.

Individual voice profiles are trained for every physician, adapting to their unique qualities and habits. Physicians do not need to change their dictation habits, making the adjustment to front-end speech recognition simple and straightforward.

Two front-end solutions are available, including a local application for traditional front-end recognition, as well as a cloud-based solution that provides more robust accuracy - a perfect choice for those physicians or patient encounters that may not be a candidate for traditional front-end recognition.

For back-end speech recognition, flexible workflow options and filtering allow your organization to select the physicians and worktypes that will be processed through speech recognition, allowing for complete control over utilization. Quality filtering is available to ensure only those draft documents worth editing are edited – poor quality drafts are disposed of and rerouted for transcription.

Improving Meaningful Use Compliance

SpeechMotion Enterprise provides the best of both worlds - through its ability to integrate seamlessly with your EMR, dictation is completed via the platform and uploaded to the correct location in the patient's electronic record. Physicians frustrated with their EMR may appreciate

"Implementing SpeechMotion was very easy, with little to no interruptions."

--Heather Olibo, RHIA
HIM Operations Liaison
Wishard Health Services

WHY DO HEALTHCARE FACILITIES ACROSS THE COUNTRY CHOOSE SPEECHMOTION?

Customization: *As a SaaS, SpeechMotion is easy to customize and simple to deploy.*

Flexible Distribution: *Multiple distribution options by facility, worktype, patient location or provider.*

Integration: *Seamlessly integrates with all leading EMR systems, including GE, Cerner, 3M, McKesson, Epic and Allscripts.*

e-Signature: *Customers utilize our online e-signature application for document signing.*

Enable Meaningful Use: *Minimize change and overcome resistance to EMRs by providing options.*

Support ICD-10*: Provide flexibility for physicians to dictate the additional narrative necessary for ICD-10 billing.*

Smart Dictation: *Keep your current dictation method; use our cost-effective VoIP option; or dictate with your smartphone.*

Minimal Hardware Requirements: *No expensive hardware to purchase or upgrade.*

Speech Recognition: *Advanced front-end and back-end speech recognition options.*

a solution like SpeechMotion Enterprise because it provides them the option to type, dictate, or both, making EMRs far less intrusive and time-consuming.

Our history of streamlined integrations with industry leading EMRs has led to improved EMR adoption rates and a faster return on investment for healthcare facilities around the country.

Value-Added Documentation

Many healthcare organizations today are searching for value in their documentation and patient data. Information contained within patient records can drive downstream processes, like auditing, coding, and billing. Data found in a patient's records can be summarized to provide discharge or transfer instructions. Problem and medication lists can be automatically extracted and prepared in time for a patient's visit.

Most healthcare providers believe this type of data extraction can only be achieved through the use of an EMR system. To extract data from an EMR, it must be placed into the EMR under certain constraints, such as field boxes and drop-down menus, effectively coding it at the time of insertion so it can be automatically extracted later.

The SpeechMotion Enterprise solution provides healthcare facilities with an advanced, value-added documentation product. Documents created through SpeechMotion Enterprise are automatically encoded using state-of-the-art natural language processing technologies. These documents are distributed in the Clinical Documentation Architecture (CDA), an industry standard used for structured data encoding and parsing.

SpeechMotion's value-added documentation product has been used by healthcare facilities to automatically populate EMRs and to drive downstream processes, creating unexpected efficiencies and cost-savings.

A Proven Solution

With hundreds of deployments and thousands of users, SpeechMotion Enterprise has been proven to be the reliable, scalable and technically advanced choice for a customized and personalized medical documentation solution. Across the country, healthcare facilities are selecting SpeechMotion because of the options it provides their physicians and staff, both now and in the future, not to mention our reputation for cost-savings and unsurpassed customer service.

From providing dictation options to overcoming EMR resistance, to providing a value-added documentation product that can turn narrative dictation into structured, encoded clinical facts, SpeechMotion is the industry leader in healthcare documentation solutions.
